

What is ScrapMap ATL?

It's a free app that helps you compost your food scraps without paying full price for a pickup service. Compost pickup in Atlanta normally costs \$30–40 a month. ScrapMap finds neighbors on your block who also want to compost, puts you in one group with one shared bin, and splits the bill. Most people end up paying about the price of two coffees a month.

Why bother? Food scraps in a landfill rot without air and release methane, a potent greenhouse gas. Composted properly, the same scraps become soil for local gardens and farms. You're not buying a gadget — you're rerouting your trash.

How it works — four steps

- 1 Put yourself on the map**
Type your address in the app. Your pin appears at the level of your block — never your exact address. Now neighbors can see there's interest nearby (and you can see them).
- 2 Join a group — or start one**
If a group near you has open spots, join it and see exactly what you'll pay. If not, start one: say where the shared bin will live (a porch, a driveway) and share the invite link. You choose how many households it takes to kick off — even just 2 works.
- 3 The group goes live**
When enough neighbors join, everyone gets a notification. The host orders the pickup service to their address, and everyone chips in their share (usually by Venmo — more on that below).
- 4 Drop your scraps, done**
Keep a container of scraps in your freezer. Once or twice a week, empty it into the shared bin. The service picks it up on a set day. That's the whole routine.

“Won't it smell? Isn't it gross?”

The secret every composter knows: **keep your scraps in the freezer**. A yogurt tub or a zip bag in the freezer door has zero smell, zero fruit flies, zero mess. Scrape your cutting board into it — about 30 seconds a day — and empty it into the shared bin whenever suits you. The pickup bins seal tight, and the service swaps them for clean ones. If you can take out the trash, you can do this.

What can go in the bin?

YES — always

DEPENDS on your service

NO — never

Fruit & veggie scraps · coffee grounds & paper filters · eggshells · bread, rice, pasta · tea (paper bags) · greasy pizza boxes (torn up) · food-soiled napkins & paper towels · nut shells · flowers & houseplant trimmings

Meat & bones · fish · cheese, milk, yogurt · buttery or oily leftovers · “compostable” cups and cutlery — fine for most pickup services, never for a backyard pile. The app tells you which.

Plastic (any kind) · glass · metal & foil · styrofoam · liquid grease or cooking oil · pet waste & diapers · cigarette butts · produce stickers (peel them off!)

Not sure about something? The app's **Learn** tab has a search box — type any item and it tells you yes or no, instantly. Golden rule: **when in doubt, leave it out.**

Money & trust — read this part

The app never touches your money. There are no payments, cards, or wallets in ScrapMap. One neighbor (the host) subscribes to the pickup service directly, and members pay the host their share — usually Venmo. The app just shows the math and the host's handle.

Don't pay anyone until the service is real. Wait until the group shows its pickup service is confirmed and you can see the bin with your own eyes. It's your block — the bin is on a porch you walk past. That's better fraud protection than any website badge.

Your address stays private. The map only ever stores and shows your location rounded to the block. Nobody — including us — can see your exact address from the app.

Real first names. Everyone in a group appears by first name, and the host is identified. You're composting with Maya and Devon from down the street, not with usernames.

Your starter kit (you already own it)

A container with a lid (old yogurt tub is perfect) · a corner of your freezer · your address typed into the app · about 30 seconds a day. That's genuinely the whole list. Open the app, drop your pin, and see who on your block is already waiting.
